

AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows, substituting any amended claim(s) for the corresponding pending claim(s):

1. (Currently amended) A wireless day planner portfolio system, comprising:
 - a first communication device;
 - a second communication device;
 - a processor coupled to the first communication device and the second communication device; and
 - an interface coupled to the processor and the first communication device;wherein the first communication device, the second communication device, the interface, and the processor are coupled to one another;
- wherein a first device that is physically remote from the interface may wirelessly communicate with the first communication device;
- wherein a second device that is physically remote from the interface may wirelessly communicate with the second communication device; and
- wherein the first device is adapted to wirelessly communicate with the second device via at least the first communication device or the second communication device.

2. (Previously amended) The system of Claim 1 wherein the portfolio integrates the first communication device, the second communication device, the processor, and the interface in communicative proximity to each other.

3. (Previously amended) The system of Claim 1 wherein the first communication device and the second communication device are adapted to communicate wirelessly with a computing device.

4. (Previously amended) The system of Claim 1 wherein the first communication device and the second communication device are adapted to communicate wirelessly with a communication network.

5. (Previously amended) The system of Claim 1 wherein the first communication device and the second communication device are transceivers.

6. (Previously amended) The system of Claim 1 wherein the wireless communication is between a Cellular Digital Packet Data communications network.

7. (Previously amended) The system of Claim 1 wherein the wireless communication is between a wireless Local Area Network.

8. (Previously amended) The method of Claim 1 wherein the wireless communication is between a Wide Area Network.

9. (Previously amended) The system of Claim 1 wherein the wireless communication is between a Global Positioning System.

10. (Previously amended) The system of Claim 1 further comprising a data entry system coupled to the interface.

11. (Original) The system of Claim 1 further comprising an (LED) Light Emitting Diode coupled to the processor.

12. (Original) The system of Claim 11 wherein the LED provides wireless communication status information.

13. (Original) The system of Claim 1 wherein the interface is enabled to receive a thin-client.

14. (Previously amended) A wireless portfolio, comprising:
a communication device;
a processor coupled to the communication device;
an interface coupled to the communication device; and
a data entry system coupled to the interface;
wherein a first device that is physically remote from the interface is adapted to wirelessly communicate with a second device that is physically remote from the interface via the communication device.

15. (Previously amended) The wireless portfolio of Claim 14 further comprising a thin-client coupled to the interface.

16. (Previously amended) The wireless portfolio of Claim 14 further comprising supporting an Infra Red Data Association IRComm Protocol.

17. (Previously amended) The wireless portfolio of Claim 14 further comprising a Blue Tooth Protocol.

18. (Previously amended) The wireless portfolio of Claim 14 further comprising transceiving audio information.

19. (Previously amended) The wireless portfolio of Claim 14 further comprising transceiving data information.

20. (Previously amended) A wireless day planner portfolio system, comprising:
a means for transmitting a wireless communication signal between a first device and a second device that are physically remote from an interface coupled to a communication device; and
a means for monitoring a wireless communication status related to the wireless communication signal, wherein the status of at least one of a following indicator from a group comprising:

- a strength of transmission;
- a speed of transmission;
- a quality of transmission;
- a direction of transmission; and

a service level.

21. (Canceled).

22. (Previously amended) A wireless day planner portfolio system, comprising:

a wireless transceiver;

an infrared transceiver;

a processor coupled to the wireless transceiver and the infrared transceiver;

an interface coupled to the processor and the wireless transceiver; and

a plurality of light emitting diodes (LEDs) coupled to the processor;

wherein the wireless transceiver, the infrared transceiver, the interface, and the processor
are coupled to one another;

wherein a personal digital assistance (PDA) coupled to the interface may wirelessly
communicate with the wireless transceiver;

wherein an infrared device that is physically remote from the interface may wirelessly
communicate with the infrared transceiver;

wherein the PDA is adapted to wirelessly communicate with the infrared device via the
interface; and

wherein the plurality of LEDs depict at least one of a following status:

a wireless communication status between the wireless transceiver and a wireless network;
a wireless communication status between the wireless transceiver and the PDA; and
a wireless communication status between the infrared transceiver and the infrared device.

23. (Currently amended) A wireless day planner portfolio system, comprising:
a first wireless transceiver;
a second wireless transceiver enabled for short range communication;
a processor coupled to the first wireless transceiver and to the second wireless transceiver; and
an interface coupled to the processor and the first wireless transceiver;
wherein a personal digital assistant physically remote and closely proximate to the interface and adapted to wirelessly communicate with the second wireless transceiver; and
wherein ~~the first wireless transceiver is adapted to communicate with a communication device that is physically remote from the interface such~~ a communication device that is physically remote from the interface is adapted to communicate with the first wireless transceiver such that the personal digital assistant and the communication device are enabled to wirelessly communicate with each other in real-time via the interface and the processor.

24. (Previously presented) The system of claim 23, wherein the personal digital assistant and the communication device are adapted to communicate wirelessly with a communications network via the day planner portfolio system, and wherein task management systems, schedules, and other information contained in the personal digital assistant are enabled to be wirelessly updated and accessed in real-time via the first wireless transceiver and the communication network.

25. (Previously presented) The system of claim 23, wherein the first wireless transceiver is enabled to support at least one communication protocol selected from a group consisting of:

Blue Tooth;

Wireless Local Area Network; and

Wireless Wide Area Network; and

wherein the second wireless transceiver is enabled to support at least one communications protocol selected from a group consisting of:

Blue Tooth; and

Infra Red Data Association IR Comm.
